eMDI Announcement- New Version 3.3:

The new 3.3 version of the eMDI program will be posted on Thursday June 18th at the conclusion of the business day and will be ready for your immediate download and use. There are a number of enhancements to existing catalog sections and software user improvements that will be installed as an outcome of this most recent update. The following is a summary of the improvements and corrections that are included within the new version:

Changes:

- Changed Double Door handing images to read LHOS, LHS, RHIS, RHOS, most active instead of "e.g. inswing left active from inside" within Therma Tru catalog section.
- Added <http://www.mdi-oshkosh.com> link to the main page and "about" tab under the "help" section to track e-MDI versions.
- Changes were made to how sills were selected when a user selects a split metal frame. Now when they pick a split metal frame, they pick it with what type of sill they want with it. So the sill choice screen no longer incorrectly appears.
- Changed the drawings for bifold pine arch top doors to match current product offerings.
- Users are limited to the selection of a split metal frame if they choose a 90 minute fire door.
- Added Deadbolt option for 1 1/2" face bore per client requests.
- Changed description of each deadbolt choice for clarification and added deadbolt prep specification "0" per client requests. Deadbolt bore specification also is more prominent within the quote format for easy identification.
- Replaced specialty items graphic on main eMDI home screen with the L.J Smith Logo. **This will be our next catalog section slated for release in July.**
- Limited the number of split metal frames that were shown based on the size of the 90 minute door selected.

Fixes:

- Added Graphic for VGTRD Villager rectangle transom back into software.
- Ball Bearing Hinges Prices now match the catalog price.
- Satin Brass/Zinc Dichromate hinges now are reset as default (standard) hinges within Therma Tru section.
- Fixed issue with Deadbolt, that switched the deadbolt from DB1 to DB3 during an import.
- Fixed the issue with eMDI failing when trying to edit a StileChoice line item.
- Fixed issue with price in interior door hinges, they were off by .60 per change made to catalog.
- Fixed issue, If a user selects a FC 111-1C the report shows they have a FC110-1C
- Fixed issue with the #730 Full Louver Pine door has 1 1/8" in its description, it now reads 1 3/8"
- Fixed issue with the SS154-1D Door description showing that it was a SS154-1C.
- Fixed error message when selecting prefinished oak backband within molding catalog.

If you have any questions regarding this update, please contact your Territory Sales Manager.
